Acquedotto Pugliese S.p.A.

A public utility serving the region for over a century, AQP is one of Europe's leading players in the management of integrated water services. The system operated by AQP is one of a kind in terms of scale, complexity, and interconnection. The company has been officially recognized by national law as a strategic asset of national interest. AQP's network spans over 24,000 kilometers of water infrastructure, including 5,000 kilometers dedicated to water conveyance. It also comprises approximately 1,500 facilities, including reservoirs, distribution hubs, and pumping stations, along with over 13,000 kilometers of sewer networks and 700 additional pumping stations.

MISSION

Ensure water supply in the managed territories, promote sustainability, and protect the environment, with a strong focus on the impacts of climate change—leveraging our organization and infrastructure.

VISION

Ensure the protection and preservation of the territory through innovation and technological development, energy efficiency and environmental sustainability, and continuous dialogue with local communities and regions.

VALUES

Service quality, customer satisfaction, and employee empowerment are the core principles that define our corporate identity.
