ECO FLOW

ECO FLOW - Environmental Climate Opportunities For Low-impact Options in Wastewater treatment

Duration
07/2025 - 07/2027

Total Budget
1.585.923,00€

EU funding
1.189.442,00€

ECO FLOW is a project co-funded by Interreg VI-A Greece–Italy 2021–2027 Programme, aimed at promoting the reuse of treated wastewater to support the shift toward a circular economy. Following an initial needs analysis, the project coordinates stakeholders to develop a cross-border roadmap for wastewater management, using innovative technologies in pilot testing and training activities to enhance technical skills. Partners from Puglia, Basilicata, Western Greece, Ionian Islands and Epirus are involved in exploring new applications of wastewater treatment, capitalizing the successful pilot plant from Rewater project (Interreg V-A 2014-2020).
